Profile

Software Engineer with experience in front-end and full-stack development, with a focus on React, TypeScript, C#/.NET, REST APIs and SQL. At Axians, I have progressively taken on greater technical responsibility for the front-end of projects in the Justice sector, contributing to implementation decisions, code reviews, troubleshooting and support for other developers. I particularly enjoy building complex interfaces and workflows, reusable components and configurable solutions, with a strong focus on maintainability and long-term code evolution.

Technical Skills

Frontend:	React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
Backend & APIs:	C#, .NET, REST APIs, Node.js
Databases:	SQL, PostgreSQL, SQL Server
DevOps & Tools:	Azure DevOps (Boards, Repos, Pipelines), Git, Docker, Kubernetes, Helm, pgAdmin
Authentication:	Microsoft Entra ID, Keycloak
Technical Interests:	AI-assisted development, LLMs, Generative AI, workflow automation

Professional Experience

Axians — Front-End Developer

May 2025 — Present

Projects for the Justice sector / IGFEJ

- Development of complex interfaces and workflows in React and TypeScript for an asset management platform, covering areas such as processes, contracts, documents, evaluations, photographs, locations, users, profiles and permissions.
- Creation and evolution of reusable components, forms and configurable structures, including JSON-driven tables and interfaces, allowing features to be adapted to different scenarios without duplicating implementations.
- Progressively took on greater technical responsibility within the project’s front-end, contributing to the definition of standards, feature structure and implementation approaches.
- Conducted code reviews, troubleshooting and technical support for other developers, helping resolve blockers and maintain consistent approaches across different areas of the product.
- Worked closely with back-end teams on the integration of REST APIs, data models, and authentication and authorization mechanisms using Microsoft Entra ID and Keycloak.
- Worked with Azure DevOps, Git, SQL/PostgreSQL and SQL Server, including branches, pull requests, and exposure to CI/CD pipelines and environments based on Docker, Kubernetes and Helm.
- Following the work delivered on the project and recommendations from the client and teams involved, I also began contributing technical support to other projects within the Justice sector.

Independent — Full-Stack Developer

Jun. 2023 — May 2025

Client and portfolio projects

- Development of websites and web applications for clients and personal projects, working across responsive interfaces, back-end logic, APIs and data persistence.
- Built end-to-end features using technologies such as JavaScript, React, Node.js, SQL and MongoDB, from data modelling and endpoints through to front-end integration.

Education

ISCTE — University Institute of Lisbon

BSc in Computer Engineering

2018 — 2021

Master’s in Computer Engineering — attended, not completed

2021 — 2022

Languages

Portuguese (Native) • English (Fluent)
